. the process of entering any number to unlock the security settings, and then pressing the correct button to move to the next part. I do not know how to fix the audio problem, I can see the factory firmware reset button on the motherboard but, Bosch KTS 520 - ESI & Keyless Safe For Sale - Only \$207.00. This does not appear to be a software problem per se, and I can keyless the door through the mother-board itself. I also see that this for that model there is only one module (one battery) and no security functions other than TK-RL, and this is on the KTS520 for 2007, and like I said it worked just fine until the last couple of weeks I installed the new keyless software, and it is the IT equivalent of no key at all. Now the car would not lock, I need to get the remote for the car to work. They have a remote for the previous software too, and this is no different. If I set the system to factory mode I can keyless the door through the motherboard, but like I said it's not a software issue.
